***Allowable Subject Matter***

Claims 2, 3, 5-7, 10, 12, 16, 19, 26-34 and 36 are allowed.

The following is an examiner's statement of reasons for allowance: Claims 2, 3, 5 and 6 are allowable over the prior art because Claim 5 sets forth a vehicle lighting device having first and second light sources with the second light source being a plasma lamp filled with gas containing charged particles and first and second electrodes with the first electrode being positioned centrally of the second electrode and wherein the second electrode is substantially annular so that streamers from the plasma lamp bridge the spacing between the two electrodes. This combination of limitations was not shown or suggested by the prior art. Claims 7, 10 and 12 are allowable over the prior art because Claim 7 sets forth a vehicle lighting device have first and second light sources with the second light source being a plasma lamp with first and second electrodes with the first electrode positioned in a central portion and the second electrode is coaxially positioned at an outer portion so that streamers travel through the central portion and arc back toward the outer portion. This combination of limitations was not shown or suggested by the prior art. Claims 16, 19, 26 and 27 are allowable over the prior art because Claim 16 sets forth a vehicle lighting device having first and second light sources in a housing with the second light source being a plasma lamp having first and second electrodes with the second electrode composed of at least one of wires integrated into a light transmitting member or an electrically conductive coating on the light transmitting member so that streamers travel from the first electrode to the light transmitting member. This combination of limitations was not shown or suggested

by the prior art. Claims 28-34 and 36 are allowable over the prior art because Claim 28 sets forth a vehicle lighting device having first and second light sources in a housing with the second light source being a plasma light with a first and second electrode, a sensor for detecting a predetermined condition and a control unit for controlling the plasma lamp based upon the output of the sensor with the control unit having one mode with the first electrode dispersing streamers and another mode which charges the first electrode and grounds the second electrode for more focused streamers. This combination of limitations was not shown or suggested by the prior art.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Any inquiry concerning this communication or earlier communications should be directed to Examiner Neils at (571) 272-2377 on a Monday or Thursday. If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Sandra O'Shea can be reached on (571) 272-2378.
